

Why Choose Cascades Coolers for Schools.

Cascades coolers are ideal for Schools and Colleges purposely manufactured for these environments where medium to heavy usage are in effect.

They come in two formats **Option (1)** Removable Drip Tray Option. **Option (2)** Drainage Option

Option (1) Removable Drip Tray

Regular checks should be made to ensure that the drip tray is not overflowing, should the drip tray require emptying please see pictures and instructions for the removal and emptying of the drip tray

- To empty the drip tray lift up the drip tray out of the cooler body see pic (no 2)

- Empty the drip tray down the nearest sink and clean the drip if necessary see pic (no3)

- Drip trays can be cleaned by using a dishwasher as an alternative method.

Option (2) Drainage

The Cascade drainage model is ideal for areas where drainage is available to connect onto, ensuring the water drains away through the drip tray system through to the rear of the cooler.

- Drip trays are secured on this option and the drainage outlet is to the rear of the cooler see pic (5)

- When connecting to drainage the height of the drain is critical and must be no higher than 16 ¼" (413mm) from the floor.

- Cascade's have an option of a full back panel to hide all the pipe-work and drainage and it also gives the security of being tamper proof along with being securely fixed to the wall.
